ABSTRACT OF THE DISCLOSURE

In a collaboration network system CNS which properly distributes a job in accordance with each processing capability of every available resource in a multi-distribution processing type network to secure the job to be efficiently executed, a host server H-SVR includes a guest system program 111 incorporated into an application layer 11. A guest system GS includes a distribution criteria 35 to distribute a sequence operation to the host server H-SVR and a guest net server managing part 34:342 issuing the guest system program 111, in accordance with the distribution criteria 35, with a job execution request for having the host server H-SVR execute a job. When receiving the job execution request, the host server H-SVR executes the job execution request via the guest system program 111.
